

Mairol –  
the complete solution for  
any stage of vegetation

Wellness for plants

As a complete solution, the **Mairol** system allows you to cover any stage of vegetation with the perfect chemical composition.

**Mairol.green** – 14 N, 12 P, 14 K – is ideal for the early stage of vegetation and a vigorous plant growth.

As the vegetation continues, **Mairol.green** can be mixed with **Mairol.red** in order to provide a flexible combination of the composition (e.g. 10 N, 16 P and 22 K) and to encourage flower and fruit formation.

In the final stages and for the stimulation of early maturity and increased yields, **Mairol.red** – 6 N, 20 P, 30 K – is applied exclusively.

Both types of **Mairol** are completely and quickly soluble in water and contain a high concentration of valuable trace elements, vitamins, growth hormones and phytohormones.
